

A/B Testing Analysis

Impact of a Discounted Subscription Offer on Conversion

Testing an updated post-onboarding subscription screen where the same \$4.99 subscription is presented as a 50% discount offer.

1. Executive Summary

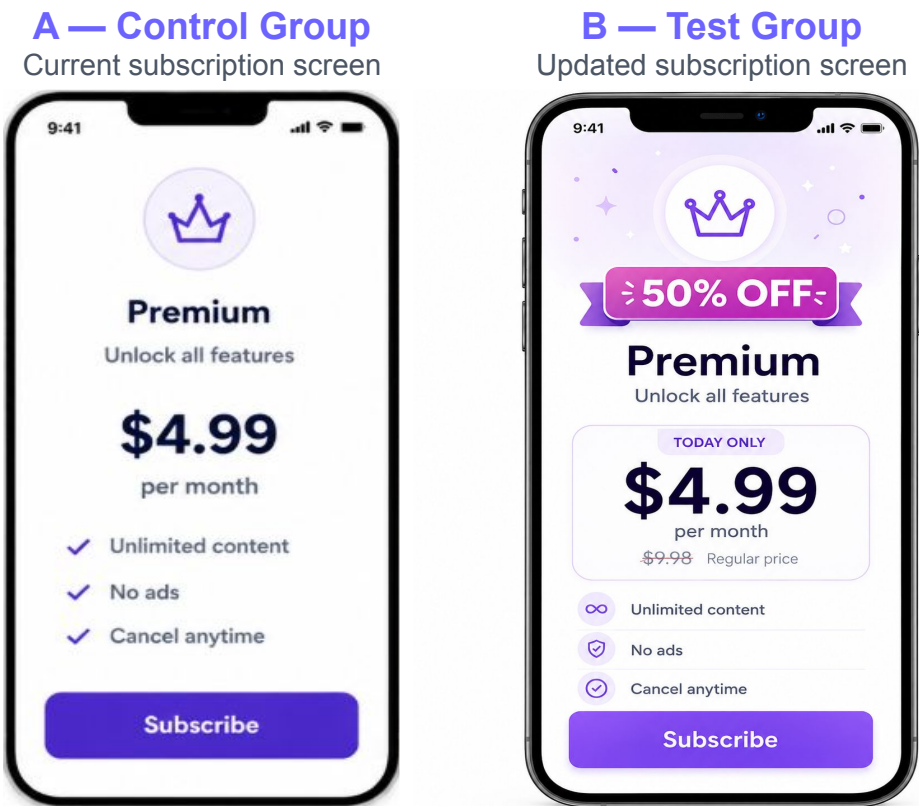

- Variant B increased subscription conversion from 6.10% to 8.90%.
- Uplift: +2.80 percentage points absolute and +45.9% relative.
- Recommendation: controlled rollout, with revenue, cancellations, refunds and retention checked before full launch.

2. Business Context

- **Business goal:** increase subscription purchases after onboarding.
- **Test setup:** compare the current subscription screen with an updated screen presenting the same \$4.99 offer as a 50% discount.
- **Key point:** the actual subscription price did not change; the tested change was screen design and offer presentation.

3. Test Variants

4. Business Question

Will the updated post-onboarding subscription screen increase subscription purchases compared with the current screen?

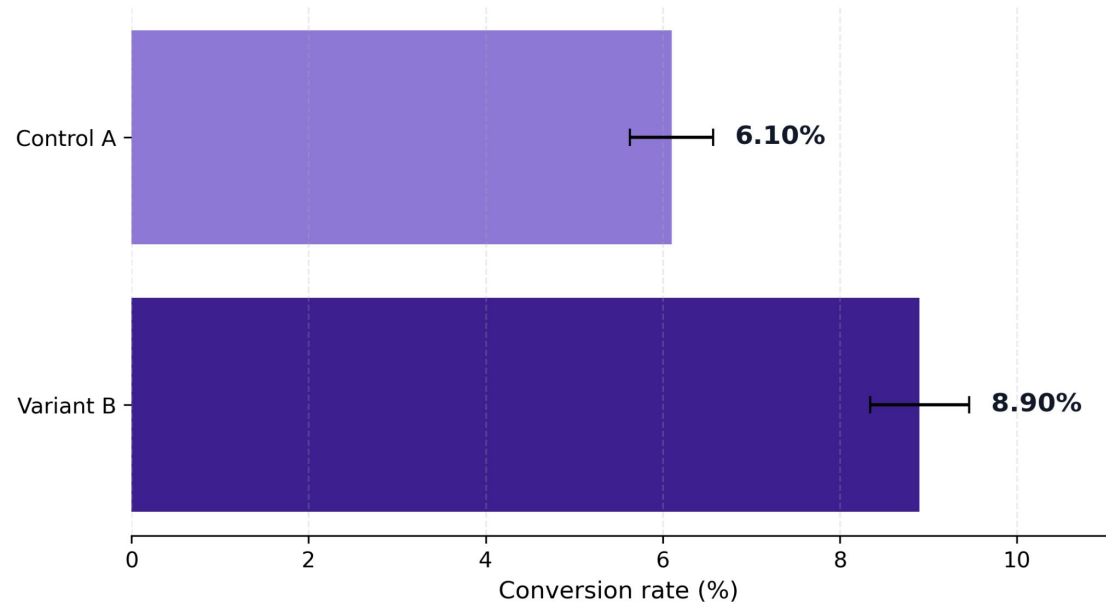

Results, Statistical Evidence & Trend

Variant B showed a statistically significant conversion uplift, but downstream business metrics still need validation.

1. Conversion Rate by Variant

Conversion Rate by Variant

Absolute uplift
+2.80 pp
(percentage points)

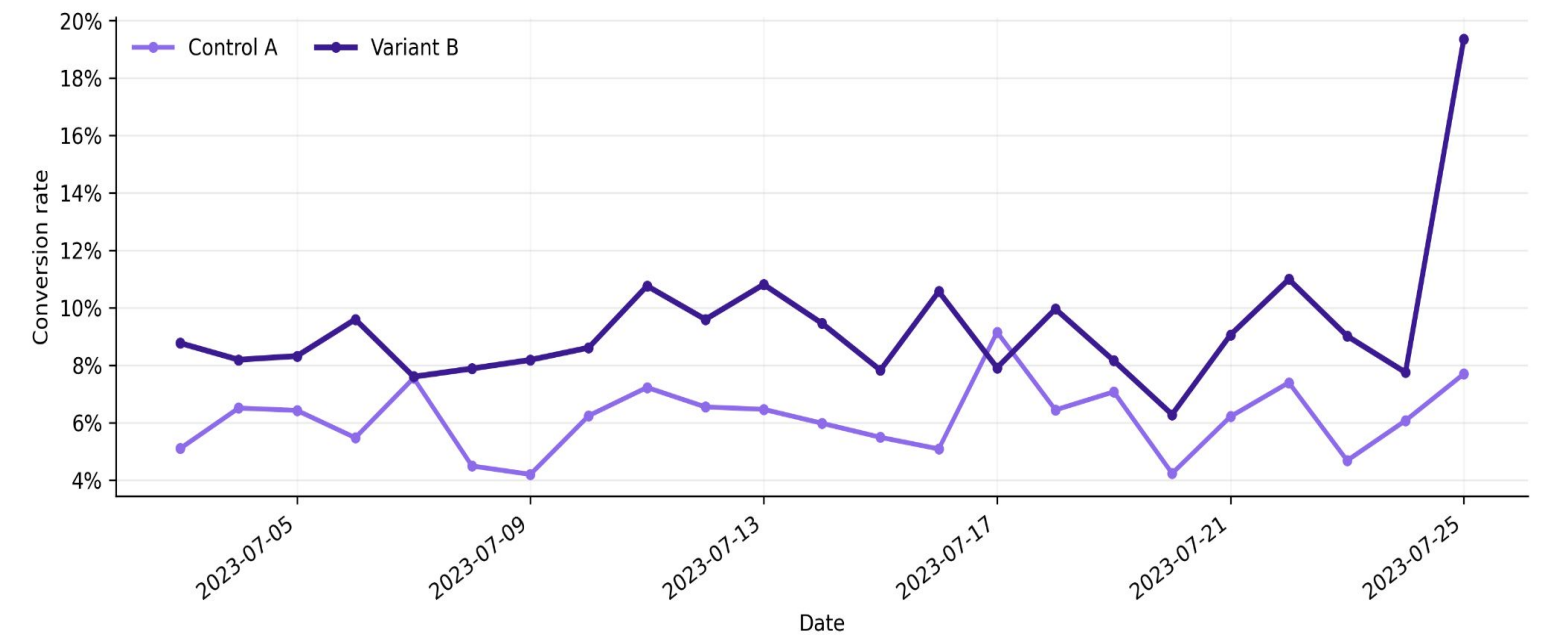

Relative uplift
+45.9%
increase vs Control A

Statistical significance
p < 0.05
two-sided test

2. Daily conversion trend by group

Interpretation

- Variant B finished with a higher overall conversion rate: 8.90% vs 6.10%.
- Daily conversion fluctuated, but Variant B was generally above Control A.
- The result is statistically significant ($p < 0.05$), but revenue, refunds, cancellations and retention should be checked before full rollout.

Business Decision, Risks & Next Experiment

Recommendation and post-test action plan

1. Recommendation

Roll out the updated subscription screen gradually to 20–30% of users before full launch.

- Monitor revenue, refunds, cancellations, retention and repeat payments.
- Expand only if the conversion uplift does not harm user quality.

2. Guardrail Metrics to Monitor

Revenue

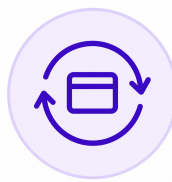

Cancellations

Refunds

Retention

Repeat payments

These metrics help confirm that the conversion lift is not creating lower-quality purchases.

3. Key Risks

- Discount-based presentation may attract more price-sensitive users.
- Short-term conversion growth may not translate into stronger long-term value.
- Presenting the same \$4.99 price as a discount offer may affect user trust if the original price is unclear.

4. Alternative Growth Test

Run a follow-up test to compare two ways of presenting the subscription offer.

Option A
Discount-based presentation

Focus: “50% discount”

Option B
Value-based messaging

Focus: unlimited content, no ads, cancel anytime

5. Recommended Next-Step Plan

Phase:
controlled rollout
20–30%

Phase:
validate guardrail
metrics

Phase:
full rollout or follow-up test
depending on results

Business view: Variant B looks promising, but it should be scaled only if post-purchase metrics remain healthy.
